

ABDUL RAOUF AHMED

CLASS OF 2026

Python Automation Developer & Systems Security Practitioner

WhatsApp: +20 101 997 1508 Email: abdoumr81@gmail.com GitHub: github.com/abdelraouf-harpy
LinkedIn: [in/abdul-raouf-ahmed](https://in.linkedin.com/in/abdul-raouf-ahmed) Location: Sohag, Egypt

EXECUTIVE PROFILE & CORE FOCUS

AUTOMATION // BOT INFRASTRUCTURE

Pragmatic Software Developer specializing in **autonomous Python bots, high-frequency web scrapers, and encrypted telemetry pipelines**. Combines academic foundations in Business Information Systems (BIS) with rigorous hands-on ethical hacking and network exploitation training (CEH, OSCP Prep). Expertly harnesses state-of-the-art AI development tools to compress prototyping cycles and engineer reliable, self-healing production systems.

TECHNICAL ARSENAL & STACK

VERIFIED CAPABILITIES

CORE LANGUAGES

Python 3.x HTML5 / CSS3
JavaScript ES6+
C++ (Basics)

BOTS & SCRAPING

Telethon Telegram API
BeautifulSoup
Requests / HTTP
JSON Pipelines

VELOCITY & TOOLS

AI Prompt Eng
Fast Prototyping
Git & GitHub
PWA Workflows

SECURITY & CRYPTO

X25519 E2EE AES-256-GCM
Network Recon
Mitigation Plans

EDUCATION, CREDENTIALS & SPOKEN LANGUAGES

120 TRAINING HOURS TOTAL

Bachelor of Business Information Systems (BIS)
Higher Institute for E-Commerce Systems — Sohag
Class of 2026 • Systems Analysis & E-Commerce

CEH & OSCP Practical Certifications
EDUX Academy • 60 Hours CEH + 60 Hours OSCP
Penetration Testing, Privilege Escalation & Recon

Arabic: Native English: Intermediate
INTERMEDIATE GOOD VERY GOOD

FLAGSHIP ENGINEERING PROJECTS (PART I)

PUBLIC PRODUCTION REPOSITORIES

1. Enterprise System & Telemetry Monitor

Lead Systems & Security Architect

github.com/DlarkFor8k/enterprise-monitor

Low-overhead telemetry monitoring agent engineered to harvest system diagnostics, process vitals, and reliably stream encrypted state updates under hostile network conditions.

- Engineered end-to-end cryptographic transport combining **X25519** elliptic-curve key agreement with **AES-256-GCM** authenticated encryption.
- Implemented resilient heartbeat daemon with exponential backoff reconnect logic, surviving prolonged network disconnects.
- High-performance C++ lightweight client agent combined with asynchronous Python aggregation reporting backend.

C++ Python X25519 AES-256-GCM Encrypted Telemetry

2. Harpy Order Management & Dispatch Bot

Full-Cycle Bot Developer

Live Platform: harpymenu.com • Enterprise Commercial Solution

Production-deployed conversational ordering system replacing manual phone taking and cashier queues with an automated Telegram ordering bot, kitchen dispatch alerts, and digital receipt generation.

- Architected multi-step conversational state machines handling dish customization, cart computation, and payment confirmations.
- Engineered instant kitchen dispatch alerts with real-time status transitions (Pending → In Preparation → Out for Delivery).
- Reduced customer order placement latency by over 80% across test deployments in food retail environments.

PRACTICAL DEPLOYMENTS

3. Autonomous Real Estate Market Aggregation Engine

Backend & Scraping Engineer

Live Bot: t.me/brookers_bot • github.com/abdelraouf-harpy/realestate-broker-bot

Automated intelligence daemon monitoring regional real estate listings, extracting market metrics, calculating price anomalies, and broadcasting instant deal alerts directly to investor Telegram channels.

- Built multi-threaded scraping scrapers utilizing **BeautifulSoup** and **Requests** with automated anti-rate-limit jitter.
- Engineered automated deduplication algorithms filtering identical listings posted across multiple forums and channels.
- Integrated instant push alerts to Telegram with one-click direct contact generation for prospective buyers and brokers.

PythonBeautifulSoupWeb ScrapingData PipelinesTelegram Channels

4. HARPY Downloader — Media Extraction Bot (@harpy_one_bot)

Python & Media Automation Engineer

Live Bot: t.me/harpy_one_bot • [High-Throughput Media Extraction Service](#)

High-throughput asynchronous media extraction daemon handling multi-platform video/audio downloading, real-time FFmpeg transcoding, and progressive stream delivery within strict API constraints.

- Architected multi-threaded extraction pipeline utilizing **yt-dlp** and **FFmpeg** for in-flight 1080p/4K 60fps and hi-res MP3 audio transcoding.
- Engineered resilient anti-blocking subsystems with automated cookie rotation, header spoofing, and dynamic session proxying.
- Integrated persistent **SQLite** state tracking and self-rotating logging handlers (5MB archives) guaranteeing zero daemon downtime.

Python 3.11yt-dlp / FFmpegSQLiteTelethon APIThread Pools

5. Smart NFC Identity & Digital Business Platform

Full-Stack & Hardware Developer

Live Platform: harpymenu.com/cards • [Physical NFC Smart Cards](#)

Contactless digital identity ecosystem linking physical NFC smart cards and dynamic QR stands to interactive online profiles, allowing users to exchange complete contact cards in a single smartphone tap.

- Designed zero-framework, ultra-lightweight client-side profile pages achieving sub-500ms tap-to-render speeds on mobile networks.
- Engineered client-side **vCard (.vcf)** generation allowing one-tap smartphone contact saving directly into iOS & Android address books.
- Crafted luxury physical hardware aesthetics with tactile NFC chip embedding and universal cross-platform iOS/Android compatibility.

HTML5 / CSS3JavaScript ES6+NFC IntegrationvCard (.vcf) Engine

| ENGINEERING STRENGTHS & DEVELOPMENT PHILOSOPHY

CORE PRINCIPLES

PRAGMATIC AUTOMATION

Targeting repetitive human toil: building self-healing bots and scrapers that deliver immediate, measurable ROI from day one.

SECURITY-CONSCIOUS CODING

Applying CEH & OSCP principles: strict input sanitization, safe credential isolation, and encrypted communication tunnels.

AI TOOLING VELOCITY

Mastering modern LLM workflows to prototype, debug, and ship production-ready architectures at triple standard speed.
